**Ban of Dimethylfumarate (DMF) - Effect on GS-Mark Approval**  
(Not authorized translation)

13.10.2009

---

**Additional information of the ZLS:**

The technical specification agreed by the AtAV to the conversion of the DMF decision is to be considered with the GS-mark approval.

**For the GS-mark approval the following procedure is applied:**

The GS laboratory informs the applicant for the GS-mark about the ban of DMF, and adds an applicants' confirmation to the documentation. If the suspicion insists that the used original basic materials contain DMF, proofs of the absence of DMF must be required and be documented also.

(Tip: With products, under use of leather are produced, e.g., leather furniture, protective gloves, protective shoes or protective clothes, DMF can already exist in the basic material.)
